

## Creating a quiz with questions from the question library vs. creating a quiz using a question pool with questions from the question library

When creating a new quiz, you have the option to create the questions from scratch or to select questions from your question library.

When working with questions from the question library, you can:

- a) <u>... set up a regular quiz which is populated by importing questions from the question library. When</u> choosing this options, learners taking the quiz will have to answer all the questions provided.
- b) ... set up a question pool for your quiz. Setting up a question pool means that there is a pool of questions from which a set number of randomised questions will be provided to learners taking the quiz. When setting up a quiz using a question pool, the instructor decides how many questions each learner will have to answer. The instructor also chooses which and how many questions from the question library will go into the pool. This means that there are usually more questions in the pool than learners will answer.

## Creating a regular quiz with questions from the question library

To create a quiz with questions from the question library, go to the quiz tool and select 'New Quiz'.
